Europe have successfully received a total of nearly 4,700 bitcoins worth around \$9621 at today's price.

On Tuesday, reports emerged of a ransomware virus affecting businesses and governments throughout Eastern Europe. Ukraine and Russia have been particularly affected.

The malware, which has been identified as a modified version of the "Petya" virus, has also affected business in Western Europe, including Maersk, Merck and WPP.

The virus locks users out of their computer and demands a ransom of \$300 paid in Bitcoin.

According to the bitcoin blockchain, there have been 42 confirmed transactions to the bitcoin wallet listed in the malware attack. The address is 1Mz7153HMuxXTuR2R1t78mGSdzaAtNbBWx.

The wallet has so far received a total of 3.751 bitcoins from
